十次方前端系统开发day06

学习目标

- 完成用户注册功能
- 完成用户登陆功能,掌握js-cookie的使用
- 完成微信扫码登陆的功能
- 完成用户中心嵌套布局,掌握nuxt嵌套路由的使用

注册新账号

第一章-用户注册

1.需求

名字 真实姓名或常用昵称 仅支持大陆手机号 短信验证 获取验证码 盛码 请输入6-16位密码 □同意协议并接受《服务条款》 注册 点击注册

2.页面构建

根据静态原型==person-loginsign.html==创建pages/login/index.vue

```
<template>
<div class="wrapper loginsign">
```

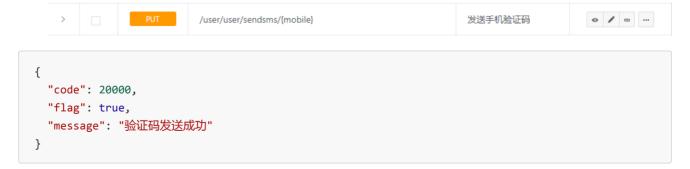

```
<div class="item signup">
     <div class="form">
       <h3 class="loginsign-title">注册新账号</h3>
       <form class="sui-form">
         <div class="control-group">
           <label for="inputname" class="control-label">名字</label>
           <div class="controls">
             <input type="text" id="inputname" placeholder="真实姓名或常用昵称" class="input-
xlarge" />
           </div>
          </div>
         <div class="different">
           <div class="radio-content">
             <div id="a1" class="phone">
               <div class="control-group number">
                 <input type="text" placeholder="仅支持大陆手机号" class="input-xlarge" />
               </div>
               <div class="control-group code">
                 <div class="input-append">
                   <input id="appendedInputButton" type="text" placeholder="短信验证"
class="span2 input-large msg-input" />
                   <button type="button" class="sui-btn msg-btn">获取验证码</button>
                 </div>
               </div>
                <div class="control-group">
                 <label for="inputpassword" class="control-label">密码</label>
                 <div class="controls">
                   <input type="text" id="inputpassword" placeholder="请输入6-16位密码"
class="input-xlarge" />
                 </div>
               </div>
             </div>
           </div>
         </div>
          <div class="control-group btn-signup">
           <label class="control-label"></label>
           <div class="controls">
             <label> <input type="checkbox" /><span class="type-text" style="font-size:12px;">
同意协议并接受《服务条款》</span> </label>
             <button type="button" class="sui-btn btn-danger btn-yes">注 册</button>
           </div>
         </div>
       </form>
     </div>
    </div>
    <div class="item">
     <div class="form">
       <h3 class="loginsign-title">用户登录</h3>
       <form class="sui-form login-form">
         <div class="control-group">
           <label for="inputname" class="control-label">手机号:</label>
           <div class="controls">
             <input type="text" id="inputname" placeholder="11位手机号" class="input-xlarge"</pre>
```

```
data-rules="required" />
            </div>
          </div>
          <div class="control-group">
           <label for="inputpassword" class="control-label">密码:</label>
            <div class="controls">
              <input type="text" id="inputpassword" placeholder="輸入登录密码" class="input-</pre>
xlarge" />
            </div>
          </div>
          <div class="controls">
           <label> <input type="checkbox" name="remember-me" /><span class="type-text"</pre>
style="font-size:12px;">记住登录状态</span> </label>
           <button type="button" class="sui-btn btn-danger btn-yes">登 录</button>
          </div>
          <div class="other-methods">
          </div>
        </form>
      </div>
   </div>
  </div>
</template>
<script>
   import '~/assets/css/page-sj-person-loginsign.css'
   export default {
</script>
```

3. 获取验证码

3.1 模拟数据与API

- 将user.yml 导入easymock
- 修改easy-mock 数据

• 编写API 创建api/user.js

```
import request from '@/utils/request'
const api_group = 'user'
const api_name = 'user'
export default {
    sendsms(mobile) {
        return request({
          url: `/${api_group}/${api_name}/sendsms/${mobile}`,
          method: 'put'
        })
    }
}
```

3.2 代码实现

• 修改pages/login.vue脚本部分

```
<script>
   import '~/assets/css/page-sj-person-loginsign.css'
   import userAPI from '~/api/user.js'
   export default {
     //数据
     data(){
       return{
         pojo:{}//用户实体
       }
     },
     //方法
     methods:{
       sendsms(){
         userAPI.sendsms(this.pojo.mobile).then(response=>{
             alert(response.data.message);
         });
       }
     }
   }
</script>
```

• 修改pages/login.vue 绑定变量

```
<input type="text" placeholder="仅支持大陆手机号" v-model="pojo.mobile" class="input-xlarge" />
```

• 修改pages/login.vue 按钮绑定方法

```
<button type="button" class="sui-btn msg-btn" @click="sendsms">获取验证码</button>
```

3.3 使用ElementUI 的弹出框

• 安装element-ui

```
cnpm install element-ui --save
```

• plugins文件夹下创建element-ui.js

```
import Vue from 'vue'
import ElementUI from 'element-ui'
Vue.use(ElementUI)
```

• 修改nuxt.config.js,加入插件与样式

• 修改pages/login.vue的脚本部分,将alert替换为以下代码

```
this.$message({
  message: response.data.message,
  type: (response.data.flag ? 'success' : 'error')
})
```

4.提交注册

4.1模拟数据与API

• 在easy-mock 增加数据

• 修改api/user.js , 增加方法

```
register(user,code) {
  return request({
    url: `/${api_group}/${api_name}/register/${code}`,
    method: 'post',
    data:user
  })
},
```

4.2代码实现

• 修改pages/login/index.vue脚本部分 增加属性

```
data() {
    return {
        pojo: {},//用户实体
        code: '' //用户输入的验证码
    }
    }
```

• 新增注册的方法

```
register() {
  userAPI.register(this.code, this.pojo).then(response => {
    this.$message({
      message: response.data.message,
         type: (response.data.flag ? 'success' : 'error')
    })

  if (response.data.flag) {
    this.pojo = {};
    this.code='';
    }
  });
}
```

• 修改pages/login/index.vue页面部分 绑定表单输入框

```
class="input-xlarge"/>
               <div class="control-group code">
                 <div class="input-append">
                   <input id="appendedInputButton" type="text" placeholder="短信验证" v-
model="code" class="span2 input-large msg-input"/>
                   <button type="button" class="sui-btn msg-btn" @click="sendsms">获取验证码
</button>
                 </div>
               </div>
               <div class="control-group">
                 <label for="inputpassword" class="control-label">密码</label>
                 <div class="controls">
                   <input type="text" id="inputpassword" placeholder="请输入6-16位密码" v-
model="pojo.password" class="input-xlarge"/>
                 </div>
               </div>
             </div>
           </div>
         </div>
         <div class="control-group btn-signup">
           <label class="control-label"></label>
           <div class="controls">
             <label> <input type="checkbox"/><span class="type-text" style="font-size:12px;">同
意协议并接受《服务条款》</span>
             </label>
           </div>
         </div>
       </form>
```

• 绑定方法

```
<button type="button" class="sui-btn btn-danger btn-yes" @click="register">注 册</button>
```

5.输入校验

以下功能由学员实现:

- 校验昵称必须填写
- 校验手机号的合法性,可以使用正则表达式进行验证。

```
^((13[0-9])|(15[^4])|(18[0,2,3,5-9])|(17[0-8])|(147))\\d{8}$
```

- 密码长度校验
- 判断是否勾选同意条款

第二章-用户登陆

1.需求

用户登录

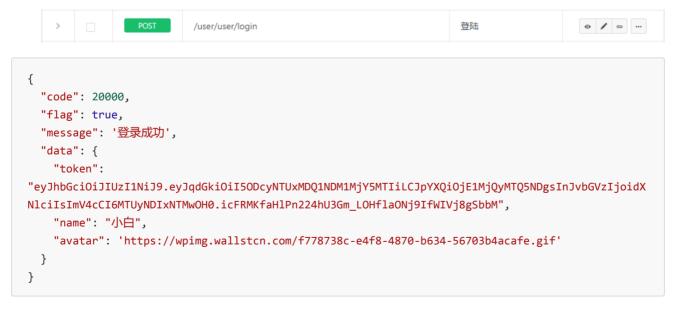

手机号:

于似写:	
11位手机号	
密码:	
输入登录密码	
□记住登录状态	登录

2.登陆验证

2.1模拟数据与API

• mock模拟数据

• API编写。 修改api/user.js , 新增方法

```
login(mobile, password) {
   return request({
      url: `/user/user/login`,
      method:'post',
      data: {
         mobile:mobile,
         password:password
      }
    });
}
```

2.2代码实现

• 修改pages/login/index.vue , 增加属性:用户名和密码

```
//数据
data() {
    return {
        pojo: {},//用户实体
        code: '', //用户输入的验证码

        mobile: '',//用户登录账户
        password: ''//用户登录密码
      }
}
```

• 修改pages/login/index.vue ,增加登陆的方法

```
login() {
  userAPI.login(this.mobile, this.password).then(response => {
    this.$message({
      message: response.data.message,
        type: (response.data.flag ? 'success' : 'error')
    })

  if (response.data.flag) {
    location.href = '/'
    this.mobile = '';
    this.password = '';
    }
  });
}
```

• 绑定页面

```
data-rules="required"
                    v-model="mobile"/>
            </div>
          </div>
          <div class="control-group">
            <label for="inputpassword" class="control-label">密码:</label>
            <div class="controls">
              <input type="text" id="inputpassword" placeholder="輸入登录密码" class="input-
xlarge" v-model="password"/>
           </div>
          </div>
          <div class="controls">
            <label> <input type="checkbox" name="remember-me"/><span class="type-text"</pre>
                                                                     style="font-size:12px;">记
住登录状态</span> </label>
            <button type="button" class="sui-btn btn-danger btn-yes" @click="login">登 录
</button>
          </div>
         <div class="other-methods">
          </div>
        </form>
```

测试效果,登陆后跳转到首页

3.登录用户信息存储

如果登录成功了,我们需要把用户的信息保存到cookie里面,方便在页面展示.

• 安装is-cookie

```
cnpm install js-cookie --save
```

• 拷贝工具类cookie.js到 utils目录下

```
token:Cookies.get(TokenKey)
}

//清除
removeUser(){
    Cookies.remove(NameKey)
    Cookies.remove(AvatarKey)
    Cookies.remove(TokenKey)
}
```

• 修改pages/login/index.vue 导入auth.js

```
import cookiUtil from '~/utils/cookie.js'
```

• 修改登陆方法,调用auth实现cookie的数据的保存

4.登陆状态显示用户信息

• 修改layouts/default.vue 代码部分

```
import cookieUtil from '~/utils/cookie'

export default {
    data() {
        return {
            user: {}
        }
    },
    created() {
        this.user = cookieUtil.getUser()
    }
}
</script>
```

• 判断在当前已经登陆的情况下显示当前登录用户名称和头像

5.未登录状态显示登陆链接

• 修改layouts/default.vue 页面部分

```
<div class="sui-nav pull-right info" v-if="user.name === undefined">
  <!-- <li><a href="/login" class="sui-btn btn-login">登录</a>
  <a href="/login" class="sui-btn btn-login">注册</a>
  <rul>
    -->
    <rul>
        router-link tag='li' to='/login'><a class="sui-btn btn-login">登录</a></router-link>
    <rul>
        router-link tag='li' to='/login'><a class="sui-btn btn-login">注册</a></router-link>
    </div>
```

6.退出登录

• 增加退出登录的方法

```
methods:{
   logout(){
     cookiUtil.removeUser()
     location.href='/'
   }
}
```

• 增加注销的链接

<a @click="logout" class="sui-btn btn-login">注销

第三章-微信扫码登陆

1. 账户申请

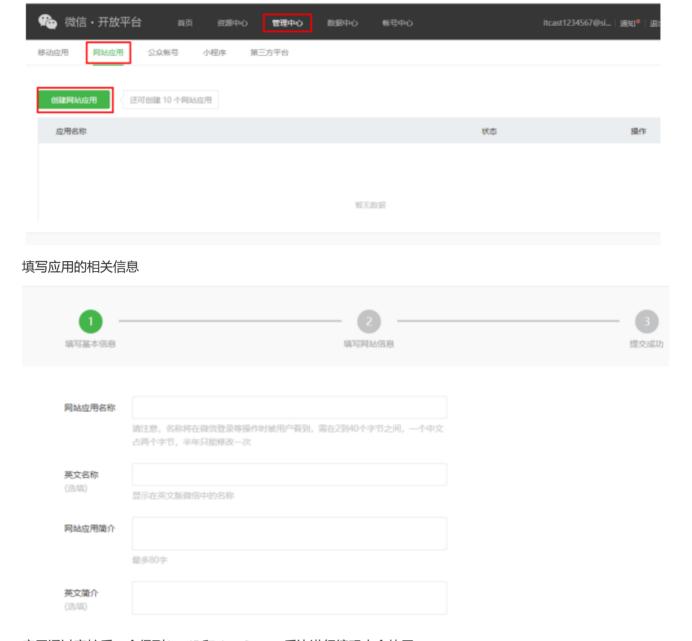

(1) 打开微信开放平台: https://open.weixin.qq.com/ 首先进行账号的注册

(2) 开发者资质认证

(3) 创建网站应用

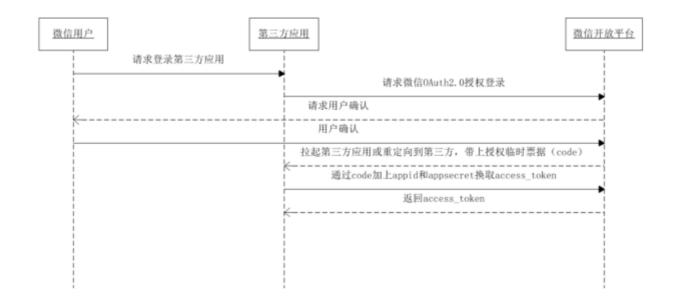

应用通过审核后,会得到AppID和 AppSecret,后边进行编码中会使用。

AppID: wx3bdb1192c22883f3 AppSecret: db9d6b88821df403e5ff11742e799105

2. 微信第三方登陆流程

- 1. 第三方发起微信授权登录请求,微信用户允许授权第三方应用后,微信会拉起应用或重定向到第三方网站, 并且带上授权临时票据code参数;
- 2. 通过code参数加上AppID和AppSecret等,通过API换取access_token;
- 3. 通过access_token进行接口调用,获取用户基本数据资源或帮助用户实现基本操作。

获取access_token时序图:

3. 获取code

(1)修改login.vue, 在export default{}中引入微信提供的js

```
head:{
    script:[
          {src:'http://res.wx.qq.com/connect/zh_CN/htmledition/js/wxLogin.js'}
]
}
```

(2)修改login.vue,在登陆表单下方添加一个div,用于显示微信登陆二维码

```
<div id="weixin"></div>
```

(3)修改login.vue,引入微信登陆二维码js

```
mounted(){
  var obj = new WxLogin({
    id: "weixin",
    appid: "wx3bdb1192c22883f3",
    scope: "snsapi_login",
    redirect_uri: "http://note.java.itcast.cn/weixinlogin"
  });
}
```

appid: 应用唯一标识

scope:应用授权作用于

redirect_uri:回调地址,是微信登陆成功后要跳转到的页面

(3)测试: http://localhost:3000/login 浏览器显示

微信登录

请使用微信扫描二维码登录 "传智播客"

我们打开手机用微信扫二维码, 会出现以下提示

传智播客

即将登录传智播客,请确认是本人操作

• 使用你的帐号登录该应用

点击确认登陆按钮,浏览器会自动跳转到

http://note.java.itcast.cn/weixinlogin?code=02147Yff12Yhgz0ArCef1qabgf147Yf0&state=undefined

这个code是微信发给用户的临时令牌。我们可以根据code再次请求微信第三方登陆接口得到access_token(正式令牌)

4 获取access_token

4.1 API

• 通过code获取access_token

1.请求说明

```
http请求方式: GET
https://api.weixin.qq.com/sns/oauth2/access_token?
appid=APPID&secret=SECRET&code=CODE&grant_type=authorization_code
```

参数	是否必须	说明
appid	是	应用唯一标识,在微信开放平台提交应用审核通过后获得
secret	是	应用密钥AppSecret,在微信开放平台提交应用审核通过后获得
code	是	填写第一步获取的code参数
grant_type	是	填authorization_code

2.返回说明

```
{
"access_token":"ACCESS_TOKEN",
"expires_in":7200,
"refresh_token":"REFRESH_TOKEN","openid":"OPENID",
"scope":"SCOPE"
}
```

参数	说明
access_token	接口调用凭证
expires_in	access_token接口调用凭证超时时间,单位(秒)
refresh_token	用户刷新access_token
openid	授权用户唯一标识
scope	用户授权的作用域,使用逗号(,)分隔

4.2 编写node服务

• 创建新的node工程, 拷贝weixin_server.js 到此工程

```
var http = require('http');
var https = require('https');
var url = require('url');
http.createServer(function(request, response){
   var params=url.parse(request.url, true).query;
   var appid='wx3bdb1192c22883f3';
    var secret='db9d6b88821df403e5ff11742e799105';
   if(params.operation==='token'){
        https.get(`https://api.weixin.qq.com/sns/oauth2/access_token?
appid=${appid}&secret=${secret}&code=${params.code}&grant_type=authorization_code`, function
(res) {
            res.on('data', function (chunk) {
                response.writeHead(200,{'Content-Type':'application/json;charset=utf-8'
,"Access-Control-Allow-Origin": "*" });
                response.end(chunk);
            });
        })
    if(params.operation==='userinfo'){
        https.get(`https://api.weixin.qq.com/sns/userinfo?
access_token=${params.access_token}&openid=${params.openid}`, function (res) {
            res.on('data', function (chunk) {
                // 发送响应数据 "Hello World"
                response.writeHead(200,{'Content-Type':'application/json;charset=utf-8'
,"Access-Control-Allow-Origin": "*" });
                response.end(chunk);
            });
       })
    }
}).listen(8888);
// 终端打印如下信息
console.log('Server running at http://127.0.0.1:8888/');
```

• 在控制台输入 node weixin_server 运行服务 地址栏测试: http://localhost:8888/?code=02147Yff12Yhgz
OArCef1qabgf147Yf0&operation=token 结果如下:

```
{
   "access_token": "10_zSHADX2JGMivKFfa4nMbZV3ECzY21UY3qrF5ADyjpr_iiLUifo-
nlN0GaRnUEN9T7BagiwSC07awp1RFIO1Ghw",
   "expires_in": 7200,
   "refresh_token": "10__z18gcJz0RXVDKtksbNTQJZ2uK1HiLJZ3I5PcSkA2VB3b6WXi2CR3R_htW6B8kKOmj-
91p08SJMfVKkL84vP1w",
   "openid": "oypcC1u9r-mxVsRGSLFqE65lysVI",
   "scope": "snsapi_login",
   "unionid": "o6JuL1gaIwnVsZC5BpRYImTHKTm8"
}
```

4.3 调用node服务

node服务编写完成后,我们在十次方前台工程中调用node服务

(1) 把weixin.js拷贝到api 用于调用什么的node服务

```
import axios from 'axios'
export default {
    getAccessToken(code){
        return axios.get(`http://localhost:8888/?operation=token&code=${code}`)
    },
    getUserinfo(access_token,openid){
        return axios.get(`http://localhost:8888/?
operation=userinfo&access_token=${access_token}&openid=${openid}`)
    }
}
```

(2)把getUrlParam.js工具类拷贝到utils(用于获取浏览器地址栏参数)

```
export default {
  getUrlParam(name) {
    var reg = new RegExp("(^|&)" + name + "=([^&]*)(&|$)");
    var r = window.location.search.substr(1).match(reg);
    if (r != null) return unescape(r[2]);
    return null;
  }
}
```

(3) 创建pages/weixinlogin.vue

```
<template>
   <div>
    </div>
</template>
<script>
import weixinApi from '@/api/weixin'
import getUrlParamUtil from '~/utils/getUrlParam'
export default {
  mounted() {
   var code = getUrlParamUtil.getUrlParam('code')
   if (code != null) {
      weixinApi.getAccessToken(code).then(res => {
        let access_token = res.data.access_token
        let openid = res.data.openid
        alert('access_token:' + access_token + 'openid:' + openid)
      })
   }
 }
}
</script>
```

5.获取用户昵称与头像

5.1 API

1. GET方式请求. https://api.weixin.gg.com/sns/userinfo?access token=ACCESS TOKEN&openid=OPENID

参数	是否必须	说明
access_token	是	调用凭证
openid	是	普通用户的标识,对当前开发者帐号唯一
lang	否	国家地区语言版本,zh_CN 简体,zh_TW 繁体,en 英语,默认为zh-CN

2. 返回说明

```
{
"openid":"OPENID",
"nickname":"NICKNAME",
"sex":1,
"province":"PROVINCE",
"city":"CITY",
"country":"COUNTRY",
"headimgurl":
"http://wx.qlogo.cn/mmopen/g3MonUZtNHkdmzicIlibx6iaFqAc56vxLSUfpb6n5WKSYVY0ChQKkiaJSgQldZuTOgvLLr
hJbERQQ4eMsv84eavHiaiceqxibJxCfHe/0",
"privilege":[
"PRIVILEGE1",
"PRIVILEGE2"
],
"unionid": " o6_bmasdasdsad6_2sgVt7hMZOPfL"
}
```

参数	说明
openid	普通用户的标识,对当前开发者帐号唯一
nickname	普通用户昵称
sex	普通用户性别,1为男性,2为女性
province	普通用户个人资料填写的省份
city	普通用户个人资料填写的城市
country	国家,如中国为CN
headimgurl	用户头像,最后一个数值代表正方形头像大小(有0、46、64、96、132数值可选,0代表640*640正方形头像),用户没有头像时该项为空
privilege	用户特权信息,json数组,如微信沃卡用户为(chinaunicom)
unionid	用户统一标识。针对一个微信开放平台帐号下的应用,同一用户的unionid是唯一的。

5.2 编写node服务

在4.2中已经拷贝了.

5.3 调用node服务

(1)在获取access_token和openid后,再次请求接口,获取昵称和头像,保存到cookie中

```
<template>
   <div>
    </div>
</template>
<script>
import weixinApi from '@/api/weixin'
import getUrlParamUtil from '~/utils/getUrlParam'
import cookieUtil from '~/utils/cookie'
export default {
 mounted() {
   var code = getUrlParamUtil.getUrlParam('code')
   if (code != null) {
      weixinApi.getAccessToken(code).then(res => {
        let access_token = res.data.access_token
       let openid = res.data.openid
       weixinApi.getUserinfo(access_token, openid).then(res02 => {
          let nickname = res02.data.nickname
          let headimgurl = res02.data.headimgurl
          cookieUtil.setUser(nickname, headimgurl, access_token)
```

```
location.href = '/'
      })
    })
}

</script>
```

6 域名与端口设置

我们刚才都是要通过手动更改url才能完成测试,主要是因为回调地址是域名而我们的工程是本地地址。其实我们要想实现一气呵成的效果也不难,只要通过域名和端口设置即可。

6.1 域名指向

我们可以编辑本地的hosts文件

```
127.0.0.1 note.java.itcast.cn
```

这样我们的工程就可以通过 http://note.java.itcast.cn:3000来访问了

6.2 NUXT端口设置

修改package.json,添加配置

```
"config": {
    "nuxt": {
        "port": "80"
     }
},
```

重新启动工程,就可以通过http://note.java.itcast.cn来访问了。

通过以上修改后,我们再次测试微信扫码登陆,就可以看到和生产环境一样的运行效果。

第四章-用户中心嵌套布局

1.子布局页

(1)根据静态原型==person-homepage.html==创建pages/manager.vue(嵌套路由部分用 <nuxt-child/> 代替),这个是用户中心的布局页

```
<template>
<div>
  <div class="myhome-personinfo" style="background-image: url('~/assets/img/widget-</pre>
homebg.png');">
  <div class="wrapper">
   <div class="person-baseinfo">
    <!--头像信息-->
    <div class="photo">
     <img src="~/assets/img/widget-myphoto.jpg" alt="" class="person" />
     <div class="share">
      <span><img src="~/assets/img/asset-QQ.png" alt="" width="34" height="28" /></span>
      <span><img src="~/assets/img/asset-weixin.png" alt="" width="28" height="28" /></span>
      <span><img src="~/assets/img/asset-weibo.png" alt="" width="28" height="28" /></span>
     </div>
    </div>
    <!--文字信息-->
     <div class="info">
     <h1>Web爱好者<span class="allinfo"><a href="~/assets/person-myfile.html" target=" blank">查
看完整档案</a></span></h1>
     <i class="fa fa-map-marker" aria-hidden="true"></i> <span class="edit-item"> 填写现居
城市</span>
       <form action="" class="sui-form form-inline">
        <input type="text" placeholder="现居城市" />
        <button class="sui-btn btn-danger save-btn">保存</button>
       </form> 
       <i class="fa fa-graduation-cap" aria-hidden="true"></i> <span class="edit-item"> 填
写毕业院校</span>
       <form action="" class="sui-form form-inline">
        <input type="text" placeholder="院校名称" />
```

```
<input type="text" placeholder="所学专业" />
       <button class="sui-btn btn-danger save-btn">保存</button>
      <i class="fa fa-shopping-bag" aria-hidden="true"></i> <span class="edit-item"> 填写
所在公司/组织</span>
      <form action="" class="sui-form form-inline">
       <input type="text" placeholder="公司/组织名称" />
       <input type="text" placeholder="职位头衔" />
       <button class="sui-btn btn-danger save-btn">保存</button>
      </form> 
      <i class="fa fa-link" aria-hidden="true"></i> <span class="edit-item"> 填写个人网站
</span>
      <form action="" class="sui-form form-inline">
       <input type="text" placeholder="个人网站" />
       <button class="sui-btn btn-danger save-btn">保存</button>
      </form> 
     </div>
   </div>
   <!--右侧编辑-->
   <div class="edit-info">
    <h4>个人简介<span class="addedit"><img src="~/assets/img/widget-edit.png" width="12"
height="12" />编辑</span></h4>
    <div class="info-box">
     <div class="edit-intro">
     暂时没有个人简介
    </div>
    </div>
   </div>
   <div class="clearfix"></div>
  </div>
 </div>
  <! --两列布局-->
 <div class="wrapper myhome">
  <div class="left-list">
   <div class="myhome-list">
    <a href="~/assets/person-homepage.html">我的主页</a>
     <a href="~/assets/person-myanswer.html">我的回答</a>
     <a href="~/assets/person-myquestion.html">我的提问</a>
     <a href="~/assets/person-myshare.html">我的分享</a>
    <a href="~/assets/person-dynamic.html">个人动态</a>
     <a href="~/assets/person-myfocus.html">我的关注</a>
     <a href="~/assets/person-mycollect.html">我的收藏</a>
     <a href="~/assets/person-myreaded.html">浏览记录</a>
     <a href="~/assets/person-account.html">账户设置</a>
    </div>
  <div class="right-content">
   <nuxt-child/>
```

```
</div>
  <div class="clearfix"></div>
  </div>
  </div>
  </template>
  <script>
  import '~/assets/css/page-sj-person-homepage.css'
  </script>
```

注意:我们使用 <nuxt-child/> 标签

(2)在pages下创建manager文件夹,静态原型==person-homepage.html==在manager文件夹下创建index.vue(用户中心的默认首页),也就是嵌套路由部分

```
<template>
           <div class="home-content">
                      <a href="#one" data-toggle="tab">我的提问</a>
                                  <a href="#two" data-toggle="tab">我的回答</a>
                      <div class="tab-content tab-wraped">
                                  <div id="one" class="tab-pane active">
                                             <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"></span> </span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span class="t
кa
                                                                    href="#">有关PHP初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span>
                                                        <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"></span> </span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span class="t
 <a
                                                                    href="#">有关JAVA初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span>
                                                         <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"></span> </span> </span> </span> </span> </span> 
 <a
                                                                   href="#">有关HTML5初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span>
                                                        <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"></span> </span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span> </span class="title"></span class="t
 ĸа
                                                                   href="#">有关C++初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span

</template>
<script>
 export default {}
</script>
```

2.用户中心各子页面

(1)根据静原型==person-myanswer==创建pages/manager/myanswer.vue(我的问答)

```
<template>
   <div class="answers">
    <h4><span>我的回答</span></h4>
    <span class="fl good"> <span class="num">8</span> 有用</span> <span class="title"><a</li>
href="#">有关PHP初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
     <span class="fl good"> <span class="num">7</span> 有用</span> <span class="title"><a</li>
href="#">有关JAVA初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
     <span class="fl good"> <span class="num">6</span> 有用</span> <span class="title"><a</p>
href="#">有关HTML5初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
     <span class="fl good"> <span class="num">12</span> 有用</span> <span class="title"><a</p>
href="#">有关C++初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
     <span class="fl good"> <span class="num">12</span> 有用</span> <span class="title"><a</li>
href="#">有关python初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
    </div>
</template>
<script>
import '~/assets/css/page-sj-person-myanswer.css'
export default {
}
</script>
```

(2)根据静原型==person-myquestion==创建pages/manager/myquestion.vue(我的提问)

```
<template>
   <div class="questions">
    <h4><span>我的提问</span></h4>
    <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"><a</li>
href="#">有关PHP初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span
class="clearfix"></span> 
     <span class="fl good"><span class="num">12</span> 有用</span> <span class="title"><a</li>
href="#">有关JAVA初级进阶的问题</a></span> <span class="fr date">4月6日</span> <span

      <span class="time">3小时前</span>
     </div>
      <div class="question">
      网页链接如何直接打开微信,并进入公众号关注页面
      </div>
     <div class="qa-num">
      <span><a href="#">http://baidu.com</a></span>
      </div>
```

```
<1i>>
     <div class="index-title">
      <span class="author">本杰明</span>
      <span class="operate">回答了问题</span> &middot;
      <span class="time">3小时前</span>
     </div>
     <div class="question">
      网页链接如何直接打开微信,并进入公众号关注页面
      现在针对这个微信是屏蔽的,你可以选择通过连接到一个其他的公众号文章中进行关
注。
     </div>
     <div class="qa-num">
      <span>关注<i>1</i></span>
      <span>回答<i>2</i></span>
     </div> 
    </div>
</template>
<script>
import '~/assets/css/page-sj-person-dynamic.css'
export default {
</script>
```

(5)根据静原型==person-myfocus==创建pages/manager/myfocus.vue(我的关注)

```
<template>
  <div class="focus-list">
  <div class="myfocus-list">
   class="active"><a href="#one" data-toggle="tab">关注的问题</a>
    <a href="#two" data-toggle="tab">关注的标签</a>
   <div class="tab-content tab-wraped">
    <div id="one" class="tab-pane active">
     <div class="fl intro">
       css中设置元素为float,不是不影响其他元素的排版吗,如下图为什么影响了?
       css
       html
       javascript
       </div>
      <div class="fr btns">
       <span class="mum">7 关注</span>
      <button class="sui-btn btn-danger btn-cancel btn-bordered">取消关注</button>
      </div>
      <div class="clearfix"></div>
```

```
css中设置元素为float,不是不影响其他元素的排版吗,如下图为什么影响了?
      css

(6) 根据静原型==person-mycollect==创建pages/manager/mycollect.vue(我的收藏)

```
<template>
  <div class="focus-list">
   <div class="mycollect-list">
    <a href="#one" data-toggle="tab">收藏的文章</a>
     <a href="#two" data-toggle="tab">收藏的企业</a>
     <a href="#three" data-toggle="tab">收藏的吐槽</a>
    <div class="tab-content tab-wraped">
     <div id="one" class="tab-pane active">
      <div class="intro">
        <div class="fl border">
         <span class="fa fa-thumbs-up" aria-hidden="true"></span>
         <span class="usenum">12</span>
         <span class="fa fa-star" aria-hidden="true"></span>
        </div>
        <div class="fl content">
         面试说通过了要回去等offer,现在都两周了,还说在ceo审批,两天联系hr一次,
都说还在等审批什么情况?工资什么的都谈好了,也要了工资证明。面试说通过了,要回去等offer,现在都两周了还说
在ceo审批,两天联系hr一次,都说还在等审批,什么情况??工资什么的都谈好了,也要了工资证明。也工资证明。
<a href="ruanyifeng.com">ruanyifeng.com</a>
        </div>
        <div class="fr info">
         <img src="~/assets/img/widget-photo.png" alt="" />
         <span class="author">本杰明</span>
        </div>
        <div class="clearfix"></div>
       </div> 
       <div class="intro">
        <div class="fl border">
         <span class="fa fa-thumbs-up" aria-hidden="true"></span>
         <span class="usenum">12</span>
         <span class="fa fa-star" aria-hidden="true"></span>
```

```
</div>
        <div class="fl content">

      </div>
     </div>
    </div>
   </div>
</template>
<script>
import '~/assets/css/page-sj-person-mycollect.css'
export default {
</script>
```

(7)根据静原型==person-myreaded==创建pages/manager/myreaded.vue (浏览记录)

```
<template>
  <div class="activities">
   <h4 class="tit"><span>浏览记录</span><span class="clear"><a href="javascript:;">清空记录</a>
</span></h4>
   <div class="notice-day">
    <div class="everyday">
    今天
    <span class="time">09:48</span>VirtualBox + Vagrant(统一开发环境) 
     <span class="time">09:48</span>VirtualBox + Vagrant(统一开发环境) 
    </div>
    <div class="everyday">
    昨天
    <span class="time">09:48</span>VirtualBox + Vagrant (统一开发环境)
    </div>
    <div class="everyday">
    09月26日
    <span class="time">09:48</span>VirtualBox + Vagrant(统一开发环境) 
    </div>
    <div class="btn">
    <button class="sui-btn btn-bordered btn-danger">加载更多</button>
    </div>
   </div>
```

```
</div>
</template>

<script>
import '~/assets/css/page-sj-person-myreaded.css'
export default {

}
</script>
```

(8) 根据静原型==person-account==创建pages/manager/account.vue(账户设置)

```
<template>
 <div class="home-content">
   <div class="activities account-type">
     <h4 class="tit"><span>账户设置</span></h4>
     <div class="account-main">
       <div class="account-person">
         <h3>个人账号</h3>
         <span class="gray index">名字</span> <span class="info">小白</span>
             <form action="" class="sui-form form-inline">
               <input type="text" placeholder="输入姓名" />
               <button class="sui-btn btn-danger save-btn">保存</button>
             </form> <span class="gray edit"><i class="fa fa-pencil" aria-hidden="true"></i> 编
辑</span> 
           <span class="gray index">个性网址</span> <span
class="info">coder.org/u/bipeng0405</span>
             <form action="" class="sui-form form-inline">
               <input type="text" placeholder="输入网址" />
               <button class="sui-btn btn-danger save-btn">保存</button>
             </form> <span class="gray edit"><i class="fa fa-pencil" aria-hidden="true"></i> 编
辑</span> 
           <span class="gray index">Email </span> <span
class="info">bi****g@163.com</span>
             <form action="" class="sui-form form-inline">
               <input type="email" placeholder="输入邮箱" />
               <button class="sui-btn btn-danger save-btn">保存</button>
             </form> <span class="gray edit"><i class="fa fa-pencil" aria-hidden="true"></i> 編
辑</span> 
           <span class="gray index">手机号码 </span> <span class="info">136****9875</span>
             <form action="" class="sui-form form-inline">
               <input type="phone" placeholder="输入手机号码" />
               <button class="sui-btn btn-danger save-btn">保存</button>
             </form> <span class="gray edit"><i class="fa fa-pencil" aria-hidden="true"></i> 編
辑</span> 
           <span class="gray index">密码 </span> <span class="info">点击修改密码</span></span>
             <form action="" class="sui-form form-inline">
               <input type="password" placeholder="输入新的密码" />
               <button class="sui-btn btn-danger save-btn">保存
             </form> <span class="gray edit"><i class="fa fa-pencil" aria-hidden="true"></i> 編
```

```
辑</span> 
        </div>
       <div class="account-other">
        <h3>第三方账号</h3>
        <span class="gray index"><img src="~/assets/img/widget-weixin.png" width="20"</pre>
/> 微信</span> <span class="name">已绑定,解绑</span> <span class="gray check"><i class="fa fa-
square-o" aria-hidden="true"></i> 公开显示</span> 
          <span class="gray index"><img src="~/assets/img/widget-QQ.png" width="20" />
QQ</span> <span class="name bind">绑定账号</span> <span class="gray check"><i class="fa fa-
square-o" aria-hidden="true"></i> 公开显示</span> 
          <span class="gray index"><img src="~/assets/img/widget-weibo.png" width="20" />
新浪微博 </span> <span class="name">已绑定,解绑</span> <span class="gray check"><i class="fa fa-
square-o" aria-hidden="true"></i> 公开显示</span> 
         </div>
     </div>
   </div>
 </div>
</template>
<script>
 export default {}
</script>
```

3. 菜单样式处理

https://router.vuejs.org/zh-cn/api/router-link.html

修改pages/manager.vue中的链接地址

```
<div class="myhome-list">
  <router-link to='/manager' active-class='active' exact tag='li'><a>我的主页/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a>/a><pr
     <router-link to="/manager/myanswer" active-class="active" tag="li"><a>我的回答</a>
     <router-link to="/manager/myquestion" active-class="active" tag="li"><a>我的提问</a></router-</pre>
link>
     <router-link to="/manager/myshare" active-class="active" tag="li"><a>我的分享</a></router-</pre>
link>
  <router-link to="/manager/dynamic" active-class="active" tag="li"><a>个人动态</a></router-</pre>
link>
     <router-link to="/manager/myfocus" active-class="active" tag="li"><a>我的关注</a></router-</pre>
link>
     <router-link to="/manager/mycollect" active-class="active" tag="li"><a>我的收藏</a></router-</pre>
link>
     <router-link to="/manager/myreaded" active-class="active" tag="li"><a>浏览记录</a>
```

```
link>
    <router-link to="/manager/account" active-class="active" tag="li"><a>账户设置</a></router-link>

</div>
```

4. 用户中心鉴权

修改pages/manager.vue代码部分

```
<script>
import '~/assets/css/page-sj-person-homepage.css'
import cookieUtil from '~/utils/cookie'

export default {
   mounted () {
      if(cookieUtil.getUser().name === undefined){
        location.href = '/login';
      }

   }
}
</script>
```

测试:在未登录的情况下在地址栏输入http://localhost:3000/manager 会自动跳转到登录页
